2 Survey Overview

Nobuko KIBE (National Institute for Japanese Language and Linguistics)

1 Overview of the Miyako Islands

Located 300 km to the south of Okinawa Island, the Miyako Islands consist of the islands of Miyakojima, Ikemajima, Ōgamijima, Irabujima, Shimojijima, Kurimajima, Taramajima, and Minnajima (see Maps 1 and 2). As of October 1, 2005, the five former municipalities of Hirara City, Irabu Town, Ueno Village, Gusukube Town, and Shimoji Town (the latter four formerly constituting Miyako District) have merged, forming Miyakojima City; Miyakojima, Ikemajima, Ōgamijima, Irabujima, Shimojijima, and Kurimajima therefore presently constitute Miyakojima City, while Taramajima and Minnajima together constitute Tarama Village, Miyako District.

Miyakojima City has a surface area of 204.59 km² (Miyakojima: 159.26 km²; Ikemajima: 2.83 km²; Ōgamijima 0.24 km²; Irabujima: 29.08 km²; Kurimajima: 2.84 km²) and a population of 55,036 (as of December 2010—Hirara area: 36,138; Gusukube area: 6,780; Shimoji area: 3,065; Ueno area: 3,128; Irabu area: 5,925), and among its main industries are the cultivation of sugar cane, mango, and the like, tourism, and distilling (figures according to *23-Nendoban Tōkei Miyakojima* [2011 *Statistics on Miyakojima*] on the Miyakojima City website).

Tarama Village comprises Taramajima, with a surface area 19.75 km² and a population of 1,273, and Minnajima, with a surface area of 2.153 km² and a population of 6 (as of June 2012, according to the Tarama Village website).

2.3 Survey content and methods

The survey consisted of four modules: ‘Basic vocabulary *a*’, ‘Basic vocabulary *b*’, ‘Accent’, and ‘Grammar’. ‘Basic vocabulary *a*’ and ‘Basic vocabulary *b*’ comprised basic vocabulary items in frequent daily use, such as items referring to body parts, family members, animals, plants, natural phenomena, time, space, tools, and numbers. The difference between groups *a* and *b* lies in the fact that those in group *a* refer to things common to different languages and dialects, while those in group *b* have specific cultural connotations. ‘Basic vocabulary *a*’ contained 189 items, while ‘Basic vocabulary *b*’ contained 149. The method used was that of translation questions, where the researcher utters a Standard Japanese vocabulary item and the speaker replies by uttering the corresponding vocabulary item of their dialect; for example, the researcher asks, ‘How do you say (...) in your dialect?’ and the speaker replies by translating the vocabulary item to their dialect.

As regards ‘Accent’, a list was made of 71 two-, three-, and four-mora nouns, which were recorded uttered in isolation as well as inserted into carrier sentences of the type ‘There is no (...)’, after which they were analyzed. The accent survey data have not been included in this report in their entirety. For an overview, the reader is referred Yosuke Igarashi’s chapter, ‘The Nominal Accent System of the Yonaha Dialect of the Southern Ryukyuan Language of Miyako: A Preliminary Report’.

Verb conjugation formed the core of the ‘Grammar’ module, which consisted of sentences designed to elicit the assertive (affirmative), negative, past, *shite*-continuative, and *ari*-continuative forms and the like of 38 verbs, such as those corresponding to Standard Japanese *tobu* ‘to fly; to

jump’ and *kogu* ‘to row’. This resulted in a total of 190 items. It is impossible, however, to elicit all 190 items in one two-hour session, so they were divided into three subsets, each group thus being tasked with eliciting about a third (around sixty) of the items. In the table above, ‘Grammar (first)’, ‘Grammar (middle)’, and ‘Grammar (last)’ refer to the first, middle, and last subset of grammar items, respectively. Consequently, researchers and speakers differ for each of the subsets at each site. Although it is desirable, if possible, to have a single speaker utter all of the items when dealing with a systematic phenomenon such as verb conjugation, time constraints forced us to use this method. As with ‘Basic vocabulary’, the elicitation method we used was that of translation questions.

In addition to the above, discourse material was recorded in Uechi. As analysis of this material is still underway, it has not been included in this report.

In addition to the leader and two research fellows of this project, the group consisted of fourteen collaborating researchers, nine university or institute staff members who were not collaborating researchers, nine graduate students, and four JSPS PD research fellows.
